LAREAUT PROACTIVE AGAINST NORTH AMERICAN CHALLENGES

INTRO : The strawberry decline situation has shaken the strawberry industry in 2013 and 2014. So as to meet the expectations of its customers, Luc Lareault Nursery has put together new methods and strategies to implement it's monitoring tools. We are sharing with you this new protocol, in order to prevent any potentially similar situation.

Knowing the causes : The strawberry decline situation has been through a critical phase of events in Quebec throughout 2013 and 2014. The causes of the decline phenomena are not simple and we dont want to neglect any hypothesis. Our monitoring tools and the genetic of our gerplasm are part of it. Climatic changes and their effect on vector control (Aphids and Whiteflies) are also considered.

Challenges addressed

Implementation of the germplasm bank: Since 2011, clonal verification trials have been added to our selection protocols of mother plants. This protocol includes genetic conformity assesment and fruit yield evaluation. Virus detection (ELISA, RT-PCR et Indexing) is not only done to the mother plant stage, but also to the elite stage just before nursery planting.

Exclusion and isolation: As early 2013 Luc Lareault nursery destroyed on a voluntary basis a portion of it's yield to create a rupture in it's supply, and start with plant material verified and tested. We increased the isolation radius of the nursery of many kilometers with a voluntary destruction agreement of fruit growing locations, neighborhing the nursery. Also, we increased our isolation distances between the different stages of plants to implement security.

Vector Control: Phytosanitary controls of vectors were doubled in frequency for systemic products and foliar products. Monitoring of pests has been reviewed and increased to three visits per week, with a special care in fall and spring seasons.

Virus testings: We introduced in our production protocol, two virus tests for SMYEV (Strawberry mild yellow edge virus) and SMOV (Strawberry mottle virus). Tests were added at the end of each propagation cycle : foundation block and certified. That means that your plants are tested twice before shipping. Each test is performed by two independant laboratories (MAPAQ and Private laboratory).

Thresholds levels: Our thresholds levels have been established following discussions and meetings with Canadian and American research scientists. We have compare our methods with Californian and European nurseries to elaborate a protocol that minimizes the risk for fruit growers who respect the state of the art fruit production methods.

New protocol presentation : In order to divulgate and explain changes and upgrades made to the production scheme, Luc Lareault nursery welcomed the visit of 40 fruits consultants of MAPAQ and private sectors (Club d'encadrement technique) of all regions of Quebec. Lectures were given by Luc Lareault and Frederic Laforge from Lareault nursery, Sylvie Deslauriers Agr. from Phytoclone Inc. and Jacques Madison Agr. from EngageAgro. The guests toured the nursery and could visualize the changes made and see the crop in preparation for 2015 deliveries. Weather conditions were exceptional, and that event favored numerous and constructive discussions.

CONCLUSION : This is what Luc Lareault is offering you for 2015 : Strawberry plants tested and verified in preparation for a North American certification. But we don't stop there, Lareault nursery commits to sustain efforts and adaptations to any new production facts and requirements in a North American context, **because our primary mission is to provide quality plants with superior performance .. Thank you ...**

Luc Lareault,
President

Frigo plant

High density plantings on annual hills systems for short varieties and day neutrals

Tray plant

Greenhouse production with forced heating cultivations

Green top

Conventional plantings on matted row system

Mini-tray

Early production on annual hills systems. Short day and day neutrals varieties as well as an types of tunnel productions on soil or hydroponics

Set of
32 Mini-tray
strawberry plugs

Varieties best adapted to organic growing

We chose to list varieties in alphabetical order within harvest group, instead of listing them by dates of harvest debut. Harvest dates and debut may change with soil types, localities and climatic variations of each season.

AAC-Lila

**PROTECTED
VARIETY**

HERE IS A QUALITY ALTERNATIVE FOR MID-SEASON IN FIVE POINTS:

- Harvest starts four days before Jewel.
- Large fruit size, with average fruit weight better than Jewel.
- Firmness, flavor and conservation, all call present.
- Similar or slightly better yield than Jewel in our 2014 trials.
- A bright red color, very shiny, lighter than Jewel which remains upon shelf conservation. Fruit is stemming friendly.

Growth and vegetation

Vigorous plant with an open growth, making picking easy.

Harvest and yield

Predicted yield similar to Jewel.
Increased picking speed.

Berries

Bright red, firm and of large size.
Excellent taste.

**LAREAULT
EXCLUSIVITY**

Red Merlin

Very early, firm and hardy for fresh markets :

- Earlier than Veestar and Wendy.
- Very firm, excellent fruit size and shelf life, ideal for wholesale.
- Fruit color and brightness, fuel its attractive power.
- A unanimous very good flavor.
- Super low cull rate and proven hardiness.

Growth and vegetation

(Plant protection applied for)
Good vigor, open canopy and low runnering. Excellent hardiness. An excellent one for high density plantings.

Harvest and yield

Very early fruiting, with a wide spread harvest including a possible second flush of flowers at the end of crop. Good yield with a low cull rate.

Berries

Excellent size, firm and bright red. Very good shelf life, shiny and flavorfull.

June bearing **Strawberries** - (continued)

AAC-Génèreuse

Growth and vegetation
Hardy and disease resistant foliage. Vigorous growth and running.

Harvest and yield
Selected for its yield. Similar harvest curve to AC ST Jean. Early mid-season.

Berries
Conical to globe shape fruit of medium size. Blood red type with a light shine similar to Kent.

FOR TRIAL

AAC-Sens

Growth and vegetation
Vigorous foliage and sustained running. Hardy plants, with no root disease sensitivity noted. Spread growth with a susceptibility to powdery mildew in late vegetation.

Harvest and yield
Will start yielding 7 to 10 days after Jewel. Late and long harvest period. Top yielder for the last five years of trials.

Berries
Bright light red shiny fruits. Flesh is firm and very juicy, flavorful and sweet berry. Light color will hold after harvest with a very good rate of shelf life.

FOR TRIAL

Rubicon

Growth and vegetation
Very vigorous growth with a spreading habit. Leaves have a bleuish dull foliage. Good tolerance to Pythium and root weevils.

Harvest and yield
Good mid-season yield , ideal for organic production or where an issue of weevils is known.

Berries
Good size fruit of uniform quality and medium firmness. Pleasant taste, blending aroma, sweetness and acidity.

FOR TRIAL

Day-neutral **Strawberries**

Growth and vegetation
Strong and upright growth habit with a good runner emission in June. Spider mites susceptible, but good tolerance to powdery mildew. Will benefit from a good winter protection for a second year crop.

Harvest and yield
Fruit set slower than Seascape but better heat tolerance. Has shown interest in southern Québec and Ontario. Excellent companion with Seascape for size stability in a Mini-tray production.

Berries
Bright shiny red color that darken upon ripening. Will sustain rain damage with very good firmness. Excellent taste when picked ripe.

Charlotte's flavor is exceptionnally outstanding, known as a European trademark for years now, Charlotte has a unanimous aromatic and perfumed taste. Charlotte is a premium commercial strawberry. A North American exclusivity from Luc Lareault nursery.

Charlotte

Growth and vegetation
Large and vegetative foliage with medium running. Good tolerance to powdery mildew and spider mites. Highly adapted to Canadian winters.

Harvest and yield
Yield comparable to Albion in the first year but superior on a second year. Second flush from mini-tray is early and abundant. Will perform better under low fertilization regimes.

Berries
Average fruit size from 17 to 20 gr. Blood red typical fruit color. Unique wild strawberry aroma developed by a low acidity content.

Seascape

Growth and vegetation
Vegetative growth of medium vigor. Will benefit from a good winter protection for a second year crop. Powdery mildew and spider mite susceptibility.

Harvest and yield
Day neutral reference for harvest curve in Eastern Canada. Bear an early crop of large size berries. Size will drop rapidly. Possible gap between second flush in mid-July.

Berries
Berries are firm and glossy with a balance taste between acid and sugar. Render an excellent taste late in the summer when nights are cooling down. Good shelf life with a tendency to darken. Will be damaged by rain.

Day-neutral **Strawberry** pink flowers

AC* Rosalyne

Growth and vegetation
Delicate and highly contrasted foliage. Sustained running and vigorous growth habit. Reddish runners will rapidly colonize your rock garden.

Flowering
Sustained flowering all season long. Good size and lovely pink flower present until frost.

Berries
Yielding a heavy load of medium size fruit. Natural flavor of wild strawberries. Perfect fit for hanging basket and balcony

Varieties best adapted to organic growing

We chose to list varieties in alphabetical order within harvest group, instead of listing them by dates of harvest debut. Harvest dates and debut may change with soil types, localities and climatic variations of each season..

Summer fruiting red **Raspberries**

AAC-Eden

There she is, long-awaited,
a raspberry equipped to compete
against imported fruits that are
flooding our markets in recent years .

**FREE
OF SPINES**

**Growth and
vegetation**

Vigorous plant. Canes free of
spines. Hardiness to be
define.

Harvest and yield

Predicted yield higher than
Nova. Harvest dates similar
or before Nova.

Berries

Large size , firm and easy to
pick. Light red color, silky, not
shiny Excellent taste.

Here is why :

Fruit size :

7,7 g. per fruit , meaning 22 fruits per
170 g. container. Size holds through
harvest.

Firmness :

A fleshy fruit with good caliber
drupelets that resists crushing during
handling.

Shelf life :

Great surprise, it keeps beyond 7 days
when refrigerated.

Harvest speed :

Because of the larger fruit and ease to
detach, the harvesting speed increases
to double compared to the currently
available varieties.

Flavor :

A very good flavor, perceived as
sweeter than our standard mid-season
variety.

What more ? :

Spinefree canes, excellent hardiness
observed in 2013-2014 winter, harvest
starts 2 days before Nova and
continues in the first week of August.
Yields measured in Nova Scotia and
Prince Edward Island are between the
10-15 t / ha.

**FAST
PICKING**

AAC-EDEN
7,7 g per fruit

NOVA

**SUPER
SHELF
LIFE**

**LARGE
SIZE**

Nova

Growth and vegetation

Vigorous stand with high suckering. Canes are
very tall with a few spines, avoid heavy soils.

Harvest and yield

Very good productivity and hardiness. Harvest
begins in mid-season, with a good tolerance to
late leaf rust.

Berries

Large size and good flavor berries. Medium red
color with good firmness. Will bear fruits
occasionally in exceptionally warm falls.

Fall fruiting red **Raspberries**

Growth and vegetation

Vigorous and stocky, stand with profuse cane
production. Short and spiny canes.

Harvest and yield

Will be the first variety to bear fruits most often in
August. Excellent yields with a spider mites
susceptibility. Mandatory to protect against late
leaf rusts (Orange rust) starting in June.

Berries

Nice pale red and good size berry. Excellent choice
for U-pick operations and retail markets.

Growth and vegetation

Good and vigorous stand. Canes of medium height.

Harvest and yield

Harvest will start right after Pathfinder. Excellent
choice for high-tunnel or any protected type of
cultivation.

Berries

Large size and firm, with a
bright shiny red color.
Will occasionally bear some
double fruits.

**PROTECTED
VARIETY**

Pathfinder

Polana

Patriot

Growth and vegetation

Vigorous bush with a spread growth of 1,5 meters tall. The open bush will facilitate trimming and harvesting. Very hardy and well adapted to heavy soil.

Harvest and yield

Late mid-season harvest. Long harvest period well suited for u-pick operations.

Berries

Bears a good flavor, firm and medium blue berry. Size of the berry starts very large and gradually declines with harvesting. Good flavor of the fruit needs a long ripening period on the bush before harvest (8 to 12 days).

Superior

Superior, like Patriot, is a new variety of highbush blueberry issued from a cross with lowbush blueberries. Bearing medium size fruits, on a 1,5 M bush with an erect growth, Superior is a very hardy mid season variety showing good tolerance to diseases. Superior is a fine addition to your blueberry patch for U-pick or transformation in northern climate. To be discovered.

Blackberries

Hardy Black

Hardy Black, a surprising blackberry !

Like the name says, this is a Hardy blackberry that bears fruit early on thorny long canes. Similar to it’s wild counterpart, berries are larger and better suited to free picking. It will perform better in our winters but may need winter protection in Zone 4 and colder.

Growth and vegetation

Vigorous plant with low suckering. Will shoot out, long bending thorny canes. Excellent hardiness.

Harvest and yield

Early and abundant. Must be winter protected in colder region.

Berries

Larger size than wild blackberries
Excellent taste.

Cherries and dwarf cherries

AVERAGE
HEIGHT
2M

Carmine Jewel

Growth and vegetation

Very vigorous with a low sucker production. Orchard easy to maintain and establish.

Harvest and yield

Early harvest with good productivity. Will bear fruits very quickly after establishment.

Berries

Small pit and lots of flesh. Fruit and flesh are both dark red. Average fruit weight of 3,5 gr. Will accommodate evenly fresh market and transformation.

Dwarf Cherry (Hybrides fruticososa X cerasus)

Dwarf cherry introduced by the University of Saskatchewan are small trees with maximum height of 2,5 m and yields that can reach from 10 to 15 Kg of fruit per tree. These plants are extremely hardy and can withstand temperature as low as -40°C. (Zone 2b). Fruits are of superior quality than those of tradi-

tional hardy cherry trees (Prunus cerasus) such as the Evans and Montmorency varieties. Fruits are also bigger and sweeter. Picking season is early August like blueberry plants; life span is of 20 - 25 years. Plants are self pollinating. Yield is from 20 to 40 pounds of fruit at maturity. Best results in soil with a ph of 6, 5

and higher and in light soil. No need to cut flowers before the third year. Pruning plants in early spring at 4th or 5th year, keep 4-5 branches otherwise plants will grow only in height. Plants will need protection from dominant winds. Natural enemies of plants are dears, flies and caterpillars.

Haskaps

Aurora

Growth and vegetation

Vigorous bush of 1,3 à 1,7 M.
Upright and spreaded.
Good resistance to mildew.

Harvest and yield

Excellent yield. Will pollinate other varieties of University of Saskatchewan. Ease of picking.

Berries

Shape is like a stretched pear.
Size average is 1,9 gr.
Ideal for gardens and free picking.

Tundra

Growth and vegetation

Vigorous bushes of 1,5 to 2,0 meters tall.
Extremely hardy, will sustained temperatures as low as -40°C.

Harvest and yield

Harvest begins very early in summer
Short harvest period in June yielding up to 10 Kg per plants.

Berries

Berries of good flavor will average a weight of 1,49 gr. Firmness is notable for a honeysuckle berry of that size. Will accommodate evenly fresh market and transformation.

HASKAPS (Lonicera caerulea L.)

Extremely hardy bushes, Haskaps are members of the Honeysuckle botanical genus. Haskap is a medium size erect bush with an open structure. It reaches a height of 1 m to 2 m according to the cultivar, and a width of 1 m. Flower buds will sustain frost of -7°C in the spring and plants will resist to -45°C in the winter. Haskaps will thrive in a fertile soil with a good drainage. It can grow in a Ph range of 4,5 to 7,5. Pollination requires a minimum of three distinct cultivars.

Asparagus Millenium

Growth and vegetation

Very good hardiness and productivity. Will exhibit rust susceptibility under favorable conditions.

Harvest and yield

Excellent yield sustained year after year.

Spears

One of the best rated spears on the market. Spears will stay tight long after emerging. Even under hot conditions spears quality do not decline.

Currants and Gooseberries

Ben Sarek

Growth and vegetation

Compact growth of a 1 meter tall, mature bush. Had shown good tolerance to white pine blister rust.

Harvest and yield

Mid season harvest. Excellent productivity.

Berries

Large size and firm berries. Excellent for transformation (jam, jellys and alcohols).

Elderberry

Elderberry (Sambucus canadensis L.)

Answering an increasing demand and interest, Luc Lareault nursery is introducing Elderberry, a wild berry with multiple virtues: Elderberry is a wild bush that will reach a height of 1 to 3 meters and a width of 2 meters. The bush bears a panicle truss of black berries with medicinal properties. Berries with high concentration of pigments and excellent antioxydant potential share multiple usage : juices, wines, jams and jellies. Those plants will adapt to a diversity of soil situation but will do best on a rich well drained soil. Give it a try.
